I. Introduction

Rudd and Wisdom, Inc. has been retained by the Texas Health and Human Services Commission (HHSC) to develop the state fiscal year 2015 (FY2015, September 1, 2014 through August 31, 2015) premium rates for health plans participating in the Texas Children's Health Insurance Program (CHIP). This report presents the rating methodology and assumptions used in developing the premium rates.

Rudd and Wisdom has provided actuarial services to the Texas Medicaid program for over 25 years. We have participated in the state's Medicaid managed care rating process since its inception in 1993 and in developing premium rates for CHIP plans since that program's inception in 2000. This year, as in previous years, we have worked closely with HHSC in developing the FY2015 CHIP premium rates.

Rudd and Wisdom has relied on the following data sources as provided by HHSC, the participating health plans and the agency's External Quality Review Organization (EQRO):

- Monthly enrollment by age group for each health plan. This includes historical enrollment since September 2010 and a projection of future enrollment through August 2015.
- Claim lag reports by age group for each health plan for the period September 2010 through February 2014. These reports were provided by the health plans and include monthly paid claims by month of service.
- Financial Statistical Reports (FSR) for each participating health plan for FY2012, FY2013 and the first six months of FY2014. The FSR contains detailed information regarding monthly enrollment, revenue, incurred claims and administrative expenses, as reported by the health plan.
- Reports from the EQRO summarizing their analysis of the health plan's encounter data.
- Reports from the health plans providing information on high volume claimants during the experience period.
- Current (FY2014) premium rates for each health plan.
- Information from both HHSC and the health plans regarding recent changes in covered services and provider reimbursement under the State Medicaid and CHIP programs.
- Information from the health plans regarding current and projected payment rates for certain capitated services, such as mental health and vision.
- FY2013 acuity risk adjustment analysis prepared by the EQRO for each participating health plan.
- Information from the health plans regarding current and projected reinsurance premium rates.
- Information provided by HHSC regarding FY2013 CHIP health plan claims cost by type of service for certain services. This information was obtained from the encounter database.

- Information from HHSC regarding FY2014 and proposed FY2015 Medicaid provider reimbursement rates.

Although the above data was reviewed for reasonableness, Rudd and Wisdom did not audit the data.

II. Overview of the Rate Setting Methodology

This report details the development of the medical component of the total premium rate. Information regarding the carve-in of prescription drugs into the CHIP program can be found in the report titled “State of Texas Medicaid Managed Care Rate Setting Pharmacy Carve-in State Fiscal Year 2015”.

The actuarial model used to derive the FY2015 CHIP premium rates relies primarily on health plan financial experience. The historical claims experience data for each health plan was analyzed and estimates for the FY2013 base period were developed. These estimates were then projected forward to FY2015 using assumed trend rates. Other plan expenditures such as capitated amounts, reinsurance costs and administrative expenses were added to the claims component in order to project the total FY2015 cost under the health plan. These projected total cost rates were determined separately for each health plan. The results of this analysis were then combined for all health plans in a service area in order to develop a set of community rates for each service area.

The health plans under review are located in the following service areas:

- Bexar County Service Area (San Antonio)
- Dallas County Service Area (Dallas)
- El Paso County Service Area (El Paso)
- Harris County Service Area (Houston)
- Jefferson County Service Area (Jefferson)
- Lubbock County Service Area (Lubbock)
- Nueces County Service Area (Corpus Christi)
- Tarrant County Service Area (Fort Worth)
- Travis County Service Area (Austin)
- Rural County Service Area

The Rural Service Area (RSA) plan serves 174 mostly rural Texas counties. The FY2015 premium rates for the RSA were developed using the same methodology as that used for all other CHIP health plans.

Premium rates were determined for the following age groups:

- Under Age One Year
- Ages 1 – 5
- Ages 6 - 14
- Ages 15 - 18

The services used in the analysis include the following:

- Inpatient Hospital
- Outpatient Hospital
- Physician Services
- Other Professional Services
- Lab, X-ray and Radiology Services
- Medical Supplies

- Behavioral Health Services
- EPSDT Medical Services
- Family Planning and Genetics Services
- Hearing Services
- Home Health Services
- Emergency Room Services
- Ambulance Services
- Vision Services
- Prescription Drugs

Services specifically excluded from the analysis include:

- Dental and Orthodontia Services

After accumulating all of the information to be used in the rate setting process, a comparison of the various sources of claims data was performed to check for consistency. We compared (i) the claim lag reports provided by the health plans, (ii) the claim amounts included in the FSRs and (iii) the claim amounts in the encounter data files as provided by the EQRO. There was satisfactory consistency between the three claims data sources for each of the health plans.

We projected the FY2015 cost for each individual health plan by estimating their base period (FY2013) average claims cost and then applying trend and other adjustment factors. (These adjustment factors are described in more detail in Section III.) We added capitation expenses for services capitated by the health plan (such as vision and behavioral health), a net cost of reinsurance, a reasonable provision for administrative expenses and a risk margin. Attachment 2 presents a description and an example of the experience analysis for a sample health plan. This type of analysis was conducted on the experience of each participating CHIP health plan.

The analysis of base period claims experience for each health plan attempted to identify and adjust for any distortions in the data. Significant variations in experience, including the impact from unusually large individual claims, were investigated and adjustments were made if deemed appropriate.

HHSC utilized the combination of two rating methodologies in setting the FY2015 CHIP premium rates – individual plan experience rating and community rating. The individual plan experience rating method is described above and documented in Attachment 2. The community rates are developed by a weighted average of the projected FY2015 cost for each health plan in the service area (from the individual plan experience rating method). The weights used in this formula are the projected FY2015 number of members enrolled in each health plan by age group. Attachment 3 presents the summary community rating exhibit for each service area along with a description of the analysis.

The base community rate in each service area was adjusted to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of acuity risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective memberships. Additional information regarding risk adjustment is included in Section III below under Risk Adjustment and in

Attachment 5.

The FY2015 CHIP health plan premium rates were then defined as the following: the minimum of (a) 110% of the rate developed using the individual experience of the plan and (b) community rate with risk adjustment. The enrollment for children under age one is so small that credible rates could not be set by area. As a result the rate for this risk group was calculated on a statewide basis.

In addition to the premium, HHSC pays the CHIP health plans a \$3,100 delivery supplemental payment (DSP) per maternity delivery. Additional information regarding DSP is included in Attachment 6.

III. Adjustment Factors

This section contains a description of the adjustment factors used in the FY2015 CHIP rate setting process.

Trend Factors

The rating methodology uses assumed trend factors to adjust the base period claims cost to the projection period. The cost trend factors used in this analysis are a combination of utilization and inflation components. The projected trend rate assumptions were developed by the actuary based on an analysis of recent experience under the CHIP program. A single trend assumption applies to all service areas but varies by projection year (FY2014 and FY2015).

The trend analysis included a review of HMO and RSA claims experience data through February 28, 2014. Based on this information, estimates of monthly incurred claims were made through December 2013. The claims cost and trend experience was reviewed separately by service area. The service area trends were then combined into a statewide average using a weighted average formula with estimated incurred claims as the weights.

The FY2014 trend assumption was developed from two components: (i) the actual estimated trend for the period September 2013 through December 2013 and (ii) the projected trend for the period January 2014 through August 2014. The experience trends for all time periods were adjusted to remove the impact of various provider reimbursement reductions and revisions that have impacted the program. We have assumed the trend for the period January 2014 through August 2014 and all of FY2015 will be 5%.

This analysis was used to select an annual trend rate assumption of 3.1% for FY2014 and 5.0% for FY2015 for each health plan.

Provider Reimbursement and Benefit Revision Adjustment

There were several significant revisions to the Texas Medicaid fee schedule which were included in the CHIP rating analysis. Provider reimbursement and benefit changes were recognized for the following services:

- APR-DRG Transition for Rural and Children's Hospitals
- Inpatient Outlier Payment Reduction
- 5.3% Outpatient Hospital Reimbursement Reduction
- Outpatient Imaging Fee Schedule Reduction
- Emergency Room Reimbursement Reduction – Flat Fee for Non-Urgent Visit
- Emergency Room Reimbursement Reduction – Multiple Visits Within 36 Hours
- 5% Ambulance Reimbursement Reduction
- Therapy Reimbursement Change
- Potentially Preventable Readmissions Reduction
- Potentially Preventable Complications Reduction
- Limit Related Party Reimbursement to 100% of Medicaid
- Reduction of Medicaid Reimbursement in Excess of Medicare

The rating adjustments for these provider reimbursement and benefit changes were calculated by applying actual health plan encounter data to the old and new reimbursement basis and the resulting impact determined. Attachment 4 presents a summary of the derivation of these adjustment factors.

Risk Adjustment

Several risk adjustment techniques are employed in the rate setting methodology. Premium rates are established separately by area and age group in order to recognize the inherent geographical and demographical variation in the cost of delivering care. In an attempt to treat the health plans more equitably regarding maternity expenses, the methodology includes a separate payment for maternity services. The rating methodology also includes a health status adjustment.

The base community rate in each service area was adjusted to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective members. The risk analysis was performed by the University of Florida's Institute for Child Health Policy (ICHP). The methodology used to incorporate the acuity risk adjustment is the Chronic Illness and Disability Payment System (CDPS). Additional information regarding risk adjustment is included in Attachment 5.

Although the results of the risk adjustment analysis were reviewed for reasonableness, Rudd and Wisdom did not audit the risk adjustment data or the results of ICHP's analysis.

IV. Administrative Fees and Risk Margin

The rating methodology includes an explicit provision for health plan administrative services. The amount allocated for administrative expenses is \$8.00 per member per month (pppm) plus 5.75% of gross premium. This amount is intended to provide for all administrative-related services performed by the HMO.

The premium rates also include an amount for premium tax (1.75% of premium), maintenance tax (\$0.065 pppm) and a risk margin (2.0% of premium).

V. CHIP Perinatal

Since January 1, 2007, a new group of clients have been covered under the CHIP program – CHIP Perinatal. The purpose of this program is to extend CHIP services to unborn children of certain non-Medicaid eligible women. Newborns under this program receive the same benefits as current CHIP participants. There is no cost sharing applied to these participants.

The CHIP benefits provided to expectant mothers are more limited in scope. They include the professional component of delivery services (for those clients under 185% FPL) and limited prenatal and post-natal services only.

We have developed premium rates for three categories of clients: (1) newborns between 185% and 200% FPL; (2) expectant mothers under 185% FPL; and (3) expectant mothers between 185% and 200% FPL.

The CHIP Perinatal FY2015 premium rates were derived using a methodology very similar to that described in Section II above for CHIP. Attachment 7 presents a description of the rating methodology used in developing the FY2015 CHIP Perinatal rates.

VI. CHIP Dental

The actuarial model used to derive the FY2015 CHIP Dental premium rates relied on recent dental plan financial experience. Historical claims experience data for the dental plans was analyzed and estimates for the base period January 1, 2013 through December 31, 2013 were developed. The claims experience was trended forward to FY2015 using assumed trend rates of 5.0% for FY2014 and FY2015.

Provisions for administrative expenses, taxes and risk margin were added to the projected claims to produce the FY2015 premium rates. Attachment 8 includes additional documentation regarding the rate calculation for CHIP Dental.

VII. Summary

The chart below presents the results of the FY2015 CHIP rating analysis and includes all components of the premium – medical and prescription drug. This report details the development of the medical component of the premium. Further information regarding the prescription drug component of the premium rate can be found in the report titled “State of Texas Medicaid Managed Care Rate Setting Pharmacy Carve-in State Fiscal Year 2015”.

VIII. Actuarial Certification of FY2015 CHIP HMO Premium Rates

I, Khiem D. Ngo, am a principal with the firm of Rudd and Wisdom, Inc., Consulting Actuaries (Rudd and Wisdom). I am a Fellow of the Society of Actuaries and a member of the American Academy of Actuaries. I meet the Academy's qualification standards for rendering this opinion.

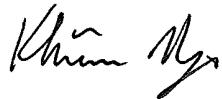

Rudd and Wisdom has been retained by the Texas Health and Human Services Commission (HHSC) to assist in the development of their state fiscal year 2015 (FY2015) managed care rate-setting methodology, assumptions and resulting premium rates and to provide the actuarial certification required under Centers for Medicare and Medicaid Services (CMS) requirements 42 CFR 438.6(c).

I certify that the FY2015 HMO premium rates developed by HHSC and Rudd and Wisdom satisfy the following:

- (a) The premium rates have been developed in accordance with generally accepted actuarial principals and practices;
- (b) The premium rates are appropriate for the populations and services covered under the managed care contract; and
- (c) The premium rates are actuarially sound as defined in the regulations.

We have relied on historical experience data and program information provided to us by HHSC. We have reviewed the data for reasonableness but have not audited the data.

Please note that actual health plan contractor experience will differ from these projections. Rudd and Wisdom has developed these rates on behalf of the State to demonstrate compliance with the CMS requirements under 42 CFR 438.6(c). Any health plan contracting with the State should analyze its own projected premium needs before deciding whether to contract with the State.

Khiem D. Ngo, F.S.A., M.A.A.A.

Attachment 2

Individual Health Plan Experience Analysis

The following exhibits present a summary of the experience analysis performed for each participating health plan. These exhibits use hypothetical experience data from a sample health plan. The actual analysis is based on experience data provided by each plan. This data was checked for reasonableness by comparing to other data sources provided by HHSC, the EQRO and the health plan. Below is a brief description of each of the exhibits contained in this attachment.

Exhibit A. This exhibit shows monthly enrollment and earned premium by age group for the period September 2010 through February 2014. This information was provided by HHSC.

Exhibit B. This exhibit shows a sample of a claim lag report. This report includes claim amounts by payment month and month of service. We analyzed claims experience for each plan by age group for the period September 2010 through February 2014.

Exhibit C. This exhibit shows the calculation of estimated monthly incurred claims. The exhibit includes the following information: (i) monthly enrollment, (ii) claim amounts incurred in that month and paid through February, 2014, (iii) estimated proportion of that month's incurred claims paid through February, 2014 (completion factor), (iv) estimated incurred claims, (v) estimated incurred claims pmpm and (vi) the ratio of this month's incurred claims pmpm to the same statistic from one year ago (trend factor). The assumed completion factors and estimated incurred claims were derived based on the actual historical claims payment pattern of the health plan.

Exhibit D. This exhibit is a summary of the sample health plan's projected FY2015 cost based on the plan's actual experience. The top of the exhibit shows summary base period (FY2013) enrollment, premium and claims experience. Trend assumptions for FY2014 and FY2015 are used to project the average base period claims cost to FY2015. Following that are several adjustments for benefit and provider reimbursement changes.

In addition to incurred claims, provision is also made for services that are capitated by the health plan, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance, an assumption is made regarding how much the plan is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$0.75 pmpm.

The rating methodology includes an explicit provision for administrative expenses. The amount allocated for administrative expenses is \$8.00 pmpm plus 5.75% of gross premium. Provisions are also included for risk margin (2.0% of gross premium), premium tax (1.75%) and maintenance tax (\$.065 pmpm).

At the bottom of Exhibit D is a summary of the projected FY2015 cost based on the above assumptions

Community Experience Analysis

The following exhibits present a summary of the experience analysis performed for each service area. HHSC utilizes an adjusted community rating methodology in setting the CHIP premium rates. The base community rates by age group vary by service area but are the same for each health plan in a service area. The community rates are developed by a weighted average of the projected FY2015 cost for each health plan in the service area. The weights used in this formula are the projected number of FY2015 members enrolled in each health plan.

Below is a brief description of each of the exhibits contained in the attachment. The exhibits present the derivation of the FY2015 CHIP HMO community premium rates for the following service areas:

Exhibit A – Bexar Area
Exhibit B – Dallas Area
Exhibit C – El Paso Area
Exhibit D – Harris Area
Exhibit E – Jefferson Area
Exhibit F – Lubbock Area
Exhibit G – Nueces Area
Exhibit H – Rural Service Area (RSA)
Exhibit I – Tarrant Area
Exhibit J – Travis Area

These exhibits show projected FY2015 experience for each of the service areas. These amounts were derived by summing amounts from each individual health plan in the service area. The experience analysis for individual HMOs is described in Attachment 2. The top portion of the exhibit shows summary base period (FY2013) experience. Following that are projected FY2015 enrollment, premium and incurred claims experience.

In addition to incurred claims, provision is also made for services that are capitated by the HMOs, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance we make an assumption regarding how much the HMO is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$0.75 pppm.

The amount allocated for administrative expenses is \$8.00 pppm plus 5.75% of gross premium. Provisions are also included for risk margin (2.0% of gross premium), premium tax (1.75%) and maintenance tax (\$.065 pppm).

At the bottom of the exhibit is a summary of the projected FY2015 cost based on these assumptions.

Attachment 4

Provider Reimbursement and Benefit Revision Adjustments

This attachment presents information regarding the various provider reimbursement and benefit revision adjustments considered in the rating analysis and how the adjustment factors were developed.

There were several significant revisions to the Texas Medicaid fee schedule which were included in the CHIP rating analysis. The rating adjustments for these provider reimbursement and benefit changes were calculated by applying actual health plan encounter data to the old and new reimbursement basis and the resulting impact determined. The attached exhibits present a summary of the derivation of these adjustment factors.

Exhibit A – APR-DRG Transition for Rural and Children’s Hospital

Exhibit B – Inpatient Outlier Payment Reduction

Exhibit C – 5.3% Outpatient Hospital Reimbursement Reduction

Exhibit D – Outpatient Imaging Fee Schedule Reduction

Exhibit E – Potentially Preventable Readmissions (PPR) Reduction

Exhibit F – Potentially Preventable Complications (PPC) Reduction

Exhibit G – Emergency Room Reimbursement Reduction – Multiple Visits within 36 Hours

Exhibit H – Emergency Room Reimbursement Reduction – Flat Fee for Non-Urgent Visit

Exhibit I – 5% Ambulance Reimbursement Reduction

Exhibit J – Therapy Reimbursement Change

Exhibit K – Medicaid Rates in Excess of Medicare Reduction

Exhibit L – Limit Related Party Reimbursement to 100% of Medicaid

Effective September 1, 2013 HHSC transitioned all rural and children’s facilities to the APR-DRG reimbursement system. Attached Exhibit A presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2013 HHSC reduced the outlier portion of inpatient facility reimbursement by 10%. Children’s hospitals are excluded from this reduction. Exhibit B presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2013 HHSC implemented an outpatient hospital reduction of 5.3%, which excludes clinical lab and outpatient imaging services. This reduction does not apply to children’s hospitals, rural hospitals, or state-owned teaching hospitals. Exhibit C presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2013 HHSC reduced hospital imaging reimbursement to 125% of the amount reimbursed for imaging performed in a physician’s office. Exhibit D presents a summary of the derivation of the rating adjustment factors.

Effective May 1, 2013 HHSC implemented revisions to hospital reimbursement to account for Potentially Preventable Readmissions (PPR). The reimbursement reductions amount to 1-2% depending on a hospital’s performance during the evaluation time period. Exhibit E presents a summary of the derivation of the rating adjustment factors.

Effective March 1, 2014 HHSC implemented revisions to hospital reimbursement to account for Potentially Preventable Complications (PPC). The reimbursement reductions amount to 2.0%-2.5% depending on a hospitals performance during the evaluation time period. Exhibit F presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2013 HHSC reduced reimbursement for non-emergent services provided in the emergency room. This included (i) a reduction in payment if an individual returns to the emergency department within a 36 hour period and (ii) non-urgent visit will be reimbursed using a flat fee. Exhibits G and H presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2013 HHSC reduced ambulance reimbursement by 5%. Exhibit I presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2013, HHSC implemented revisions to the therapy fee schedules. Reimbursement will be reduced by 2.5% for Comprehensive Outpatient Rehabilitation Facilities/Outpatient Rehabilitation Facilities (CORFs/ORFs), 4% for independent therapist operating in an office setting, and 1.5% for therapy services provided inside the home. Exhibit J presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2013 HHSC reduced all Medicaid rates that are in excess of Medicare. Exhibit K presents a summary of the derivation of the rating adjustment factors.

Effective September 1, 2010, HHSC revised the rating methodology to exclude from the claims experience base any amounts paid by a health plan to a related party in excess of 100% of Medicaid. Exhibit L presents a summary of the derivation of the rating adjustment factors.

(2) Equals FY2013 health plan fee-for-service claims for all services (ICHP provided encounter data).

(3) Additional cost divided by FY2013 Total Incurred Claims.

Attachment 5

Acuity Risk Adjustment

The rate setting methodology incorporates a risk adjustment technique that is designed to adjust the base community rate in each service area to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of acuity risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective members. The risk analysis was performed by the University of Florida's Institute for Child Health Policy (ICHP). The methodology used to incorporate the risk adjustment is the Chronic Illness and Disability Payment System (CDPS). The attached exhibits (provided by ICHP) present a summary of the risk adjustment analysis. There is a separate exhibit for each age group.

The column titled Case Mix on the chart is the acuity risk adjustment factor. It is the ratio of the predicted average cost of the individual health plan's membership divided by the predicted average cost of the entire service area's membership. The risk adjustment factor is applied to the community rate for each health plan and age group. If necessary, an additional adjustment was made to the risk adjusted community rates to ensure that, in total, they produce the same premium as the community rates.

The risk adjustment factors determined by ICHP for the Under Age 1 category were not applied in developing the FY2015 premium rates due to the relative small size of this category and the resulting variation in acuity scores.

Attachment 6

Delivery Supplemental Payment

The rate setting methodology includes a risk adjustment technique designed to provide uniform treatment of the health plans for costs related to maternity services. In order to recognize the potential inequity that might arise between health plans with respect to the proportion of maternity cases, HHSC reimburses each plan \$3,100 for each birth.

Attachment 7

CHIP Perinatal Rating

Since January 1, 2007, a new group of clients have been covered under the CHIP program – CHIP Perinatal. The purpose of this program is to extend CHIP services to unborn children of certain non-Medicaid eligible women. Newborns under this program receive the same benefits as current CHIP participants. There is no cost sharing applied to these participants.

The CHIP benefits provided to expectant mothers are more limited in scope. They include the professional component of delivery services (for those clients under 185% FPL) and limited prenatal and post-natal services only.

We have developed premium rates for three categories of clients: (1) newborns between 185% and 200% FPL; (2) expectant mothers under 185% FPL; and (3) expectant mothers between 185% and 200% FPL.

The CHIP Perinatal FY2015 premium rates were derived using a methodology very similar to that described in Section II above for CHIP. Below is a description of the trend, benefit and provider reimbursement adjustments, risk adjustment and administrative cost provisions included in the CHIP Perinatal rates.

Trend Factors

The rating methodology uses assumed trend factors to adjust the base period claims cost to the projection period. The cost trend factors used in this analysis are a combination of utilization and inflation components. The projected trend rate assumptions were developed by the actuary based on an analysis of recent experience under the CHIP Perinatal program. The analysis included a review of claims experience data through February, 2014.

The FY2014 trend assumption was developed from two components: (i) the actual estimated trend for the period September 2013 through December 2013 and (ii) the projected trend for the period January 2014 through August 2014. The experience trends for all time periods were adjusted to remove the impact of various provider reimbursement reductions and revisions that have impacted the program. We have assumed the trend for the period January 2014 through August 2014 and all of FY2015 will be 5%.

This analysis was used to select an annual trend rate assumption of 7.4% for FY2014 and 5.0% for FY2015 for each health plan.

Provider Reimbursement Adjustment

The types of adjustments for benefit and provider reimbursement changes, and the methodology for estimating the cost impact of the changes, are the same for CHIP Perinatal as described in Section III above for CHIP. Exhibit C presents a summary of the adjustment factors.

Administrative Fees and Risk Margin

The rating methodology includes an explicit provision for health plan administrative services. The amount allocated for administrative expenses is \$12.50 pmpm plus 5.75% of gross premium.

This amount is intended to provide for all administrative-related services performed by the HMO.

In addition to incurred claims, provision is also made for services that are capitated by the HMOs, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance we make an assumption regarding how much the HMO is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$0.75 pppm.

The premium rates also include a provision for premium tax (1.75% of premium), maintenance tax (\$0.065 pppm) and a risk margin (2.0% of premium).

Summary

Exhibit A presents current (FY2014) premium, split between medical and prescription drug, and delivery supplemental payment (DSP) rates, FY2015 premium, split between medical and prescription drug, and DSP rates and a comparison of FY2014 and FY2015 premium rates. Exhibit B presents the summary community rating exhibit for each service area along with a description of the analysis. The enrollment in both the Newborn 185-200% FPL and Perinate 185-200% FPL risk groups are so small that credible rates could not be set by area. Thus the rates for these two risk groups were calculated on a statewide basis. In addition to the premium, HHSC pays the health plans a \$3,100 delivery supplemental payment (DSP) per maternity delivery for those CHIP Perinatal clients between 185% and 200% FPL.

FY2015 CHIP Perinatal Rating

Rating Assumptions

Benefit and Provider Reimbursement Changes

- (1) APR-DRG Implementation
- (2) Inpatient Outlier payment reduced by 10%
- (3) Outpatient hospital reimbursement reduced by 5.3%
- (4) Outpatient imaging fee schedule limited to 125% of reimbursement in a physician office
- (5) Reduction for potentially preventable readmissions
- (6) Reduction for potentially preventable complications
- (7) Reduction for multiple visits within a 36-hour period
- (8) Flat fee for non-urgent ER visits
- (9) Ambulance reimbursement reduced by 5%
- (10) Therapy reimbursement reduction
- (11) Reduction for Medicaid rates in excess of Medicare
- (12) Limit reimbursement to related party

Attachment 8

CHIP Dental Rating

Exhibit A presents a summary of the actuarial model used to derive the FY2015 CHIP Dental premium rates. The premium rates rely on recent dental plan financial experience. Historical claims experience data for the dental plan was analyzed and estimates for the base period January 1st, 2013 through December 31th, 2013 were developed. The claims experience was trended forward to FY2015 using assumed trend rates of 5.0% for FY2014 and FY2015. An adjustment was also made for an expected increase in utilization as a result of the Pay-for-Quality (P4Q) program.

Provision for administrative expenses (\$1.75 pppm), risk margin (2.0% of premium), premium tax (1.75% of premium) and maintenance tax (\$.022 pppm) were added to the projected claims to produce the FY2015 premium rates.

The bottom of the exhibit shows a summary of the projected FY2015 cost based on these assumptions and the experience rate increase.

Attached Exhibit B presents a summary of the historical CHIP dental plan claims experience.

Attached Exhibit C presents the derivation of the Pay-for-Quality utilization adjustment factors. Effective January 1, 2014, the P4Q program places two percent of each dental plan's premium at risk. In order to retain the full two percent of premium, we have assumed that each dental plan will increase preventive service utilization by closing the gap between the attainable goal and the baseline experience (calendar year 2013) by 15% each year for each of the P4Q measurements. Exhibit C-1 presents the estimated cost increase as a result of the P4Q program. The top of the exhibit shows the CY2013 baseline period measurement value, attainable goal and cost per member receiving services for each of the P4Q measurements. The middle of the exhibit shows the increase in utilization for each of the P4Q measurements needed to close the gap between the attainable goal and the baseline experience by 15% each year. The bottom of the exhibit shows the estimated increase in cost as a result of the P4Q program. Exhibit C-2 presents the derivation of the P4Q adjustment factor by redistributing the estimated increase in cost by age groups.
